Sophomore Research

17 May 2019

Academies of Loudoun International Collaboration Application

I am applying to both Korea and Singapore.

1. I am interested in applying to this program because it provides me with a priceless opportunity to collaborate with and, more significantly, learn from my fellow students in the international community of science for the overall purpose of enhancing my research skills and abilities.
2. My primary interest area that could be adapted to an international collaboration is the advancement of medicine through artificial intelligence.
3. I think that the strengths I possess that will be most beneficial in an international science collaboration are my excellent teamwork abilities, assiduous work ethic and patience, and scientific knowledge.
4. I anticipate gaining several things, but most of all I anticipate a different perspective on the research I am attempting and the methods to conduct the research. Along with my own perspective and that of my partners/collaborators, the problem I am investigating would be able to be solved much more efficiently.
5. Other fields that I am very passionate about researching include biology, physics and chemistry, sequentially.
6. The only field that does not particularly interest me is engineering.
7. I would be willing to be assigned to a topic/partner not of my own choosing.

8. I would be able to host two students in the Autumn.
